

# GRIPflow®

R E P O R T

EBWAY HAS IDEAS AND MONEY SAVING SOLUTIONS TO ALL KINDS OF METAL STAMPING APPLICATIONS.

## Shave the costs... Not the Holes

**GRIPflow®** is the best way to produce quality stampings. This metal stamping process can pierce straight, reamed-like holes for the entire thickness.

**Web-Section:** The material that is between a hole, slot, etc and another hole, slot or part contour. GRIPflow® can have web-sections that are less than 40% of the material thickness.

Fully sheared side-walls provide 100% bearing surface which directly attributes to a greater accuracy and longer wear life.

GRIPflow® is able to make this part complete to the print requirements in a Compound Die (only one station and one cycle of the press) eliminating the necessity to drill the holes, mill or shave the contour of the part and/or grind the bottom mounting surface.

The result is a more cost-effective and time-efficient process.

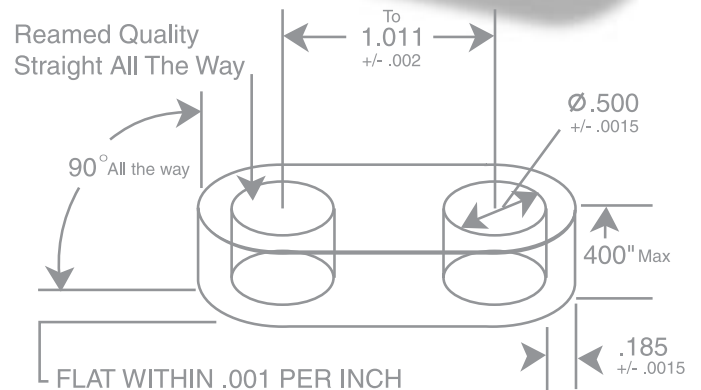

*"Others may catch on, but they will never catch up"*

*We did not invent stamping, but we have made the best of it.*

## WE ARE INTERESTED IN:

- Purchasing GRIPflow® stampings
- Purchasing GRIPflow® Press to make parts for our production.
- Purchasing GRIPflow® Press to make and sell parts. We are a contract stamper.
- Have representative call us.
- Send sample parts (state size, thickness and material)
- Send GRIPflow® World Record Keychain
